Peptide Science

Subject Index to Volume 47

Adopted folded structure, 31
$\alpha_4\beta_1$, 265
α-to-β transition, 83
Amphibian skin, 435
Amphiphilic peptide, 75
Amyloidogenesis, 83
Antagonists, 265
Anti–trans azobene monoclonal antibody, 159
Antibiotics, 451
Antimicrobial peptides, 435, 465, 479
Antipeptide antibodies, 405
Apolar–polar competition for hydration, 167
Apolar–polar repulsive free energy of hydration, 167
Arthropods, 465
Artificial receptors, 285
Assembly of protein at interfaces, 167
Atomic force microscope technique, 159

Bacteria, 451
Bacterial infections, 465
BBA motif, 23
Bead loading amplification, 381
Biological roles, 415
Biomaterials, 143
Biophysics, 127
Biosensors, 63

C^{α}-Tetrasubstituted α-amino acids, peptides rich in, 153
Cell functions, 225
Cell regulation, 197
Cellular, 277
Cellular receptor binding, 143
Chemical libraries, 365
Cis–trans photoisomerization, 159
Coiled coil, 101
Collagen mimetics, 127
Combinatorial chemistry, 353
Conformational analysis, of TOAC peptides, 153
Continuous synthesis, 397
Cotton, 397
Cysteine, 465
Cytochrome c, 285

De novo design, 75
De novo designed model peptides, 41
De novo designed polypeptide catalysts, 31
De novo designed protein, 101
Defensin, 479
Dendrimer, 381
Dependencies of the temperature of the inverse temperature transition, 167
Differential scanning calorimetry, 167
Dimer, 277
Disulfide bridge, 101, 479
Drug discovery, 197, 311

Electron spin resonance, of TOAC peptides, 153
Endothelial cell attachment, 143
Epidermal growth factor-like, 299
Epitope transfer, 265

Fertilin, 299
Fertilization, 299
Five axioms for functional design of protein-based polymers, 167
Fluorescence quenching, of TOAC peptides, 153
Fungal infections, 465

General-acid catalysis, 31
Grb2, 243

Hapten-specific binding, 159
3_{10}-Helical structure, of TOAC peptides, 153
Helix propensity, 41
Helix structures, 5
Hemoproteins, 5
Hevein- and knottin-like peptides, 479
Histidine, 31
Hydrolysis, 31
Hydrophobic folding and assembly transitions, 167
Hydrophobic-induced pKa shifts, 167
Hyperbranched polymers, 381

IbAMP, 479
Implant material, 185
Independently folded polypeptide motifs, 23
Inhibit, 277
Innate immunity, 435, 465
Integrins, 265
Inverse temperature transitions, 167
Invertebrates, 465
Ion channel, 75

Leads for drug design, 93
Libraries, 397
Linear amphipathic α-helical antimicrobial peptides, 451
Lipid bilayers, 159
Lipid monolayer, 159
Lipid transfer protein, 479
ΔT_t mechanism of free energy transduction, 167
T_t-based hydrophobicity scale, 167

MBP1, 479
Membrane permeation, 451
Membrane protein, 75
Membrane protein engineering, 41
4-Methylimidazole, 31
Microwave dielectric relaxation, 167
Mimochromes, 5
Miniaturized proteins, 5

Miniproteins, 23, 93
Mode of action, 415
Model systems, 5
Molecular architecture, 143
Molecular imprinting, 185
Molecular machines and materials, 167
Mouse, 299
Multidisulfide-containing proteins, 93
Multiple antigen peptide system, 381
Multiply cleavable linkers, 353

Natural target domains, 23
nmr spectroscopy, 265
Non-natural amino acid, 179
Nonpeptide, 243
Novel macromolecules, 63

Pathogen, 479
Peptide, 179, 277
Peptide antibiotics, 415
Peptide conformation, TOAC-based, 153
Peptide design, 83
Peptide interactions, TOAC-based, 153
Peptide synthesis, 299
Peptide-amphiphile, 143
Peptide-based polymers, 167
Peptide-lipid interactions, 451
Peptides, 265
Peptidomimetic, 243
Peptoid, 127
Phosphopeptide, 243
Phosphotyrosine, 243
Photoswitchable peptide antigens, 159
Planar supports, 397
Planer lipid bilayers, 75
Plant defense peptides, 479
p-Nitrophenyl esters, 31
Polyacrylamide-based peptide synthesis, 405
Polyamidoamine, 381
Polyethylene glycol–polystyrene (PEG–PS), 365
Polymeric supports, 365
Poly(3-methylthiophene), 179
Protein adsorption—X-ray photoelectron spectroscopy, 185
Protein de novo design, 63
Protein folding, 63, 83, 101
Protein kinase assays, 197
Protein kinase inhibitors, 197
Protein mimics, 93
Protein monolayer, 185
Protein stability, 101
Protein surface recognition, 285
Protein tyrosine kinases (PTK), 197
Protein–protein interactions, 243
Protein–tyrosine kinase, 225
Protein–tyrosine phosphatase catalysis, 225
Protein–tyrosine phosphatase inhibitors, 225
Protein–tyrosine phosphatases, 225
Protein-based polymers, 167
PTK structure, 197

Quartz crystal microbalance technique, 159

Receptor, 265
Resins, 405

Safety-catch linkers, 353
Scorpion toxin, 93
Self-assembling systems design, 167
Self-assembly, 143, 185
Self-catalytic reaction, 83
Signal transduction, 143, 243
Snakin, 479
Solid surfaces, 159
Solid-phase combinatorial chemistry, 365
Solid-phase organic synthesis, 311
Solid-phase peptide synthesis, 365
Solid-phase synthesis, 353, 381, 397
Squarylium dye, 179
Src homology domain, 243
Stretch-induced pKa shifts, 167
Structural cassette mutagenesis, 101
Structural motif, 93
Structural templates, 93
Structure-based design, 265
Structure-based drug design, 243
Structures, 415
Substrate motifs, 197
Substrate specificity, 197
Supports, 311
Supramolecular assembly, 75
Surface modification, 185
Surface pattern—biocompatibility of, cyclic peptide for, porphyrin for, 185
Synthetic peptide, 75
Synthetic peptides, 405

Template, 127
Template approach, 185
Template Assembled Synthetic Proteins (TASP), 63
Template-assembled synthetic proteins, 75
Thin film, 179
Thionin, 479
Thrombosis, 143
Tissue engineering, 143
Topological templates, 63
Trans *p*-phenylazophenylalanine, 159
Transcription factor, 277
Transesterification, 31
Triple helix, 127

Vascular cell adhesion molecule, 265

X-ray diffraction, of TOAC peptides, 153

Zap70, 243
